2. The writer is forwarding this material to you with the thought that you may wish to show it to [redacted] [redacted] have supported APTI activities for a long time. It is interesting to note that the material is tasteless, odorless and capable of easily being concealed in any common liquid, hot or cold. It is, as you know, extremely powerful. One hundred grams or 100/1,000,000 of a gram would be a heavy dose and this amount in a crystalline state could easily rest on the head of a pin. Sufficient to say that the amount contained in the attached box would probably produce serious injury for periods of eight to sixteen hours and possibly longer for all security personnel [redacted] The writer, however, does not recommend testing it on the Christmas party to be usually present at Christmas office parties.
